

WOLF

This decidedly communicative animal with its pronounced sense of family never loses its orientation and always acts for the benefit of his kind. He is the protector of the private living space and his family, as well as the guardian of the threshold in mythology – and thus serving as a perfect role model for our door intercoms.

The front door is the access to the private and thus well-kept habitat. With DIVUS CIRCLE as the outdoor unit and DIVUS TOUCHZONE as the indoor unit, you get an intercom system that stands for total comfort, increased safety and elegant design. As a system, this bundle sets new standards in excellent design and pioneering technology for private buildings, offices, medical practices, retail outlets and commercial real estate right up to tower buildings.

DIVUS offers an interesting basic system for electrical installers and system integrators, which is straightforward in terms of installation and configuration and can be extended at any time.

With the starter set, consisting of a door intercom and the indoor unit: TOUCHZONE 7 with multi-touch display, a full-fledged intercom system can already be realized.

INTERCOM

Everything under control

DIVUS Touchpanel

DIVUS TOUCHZONE 15

DIVUS panels are timeless and of the highest quality. They fit into any environment and visualize your building with DIVUS OPTIMA in an elegant and intuitive way. You will surely find the right panel for every project. The product range extends from the small 7" up to the 22" device. DIVUS touch panels also provide the necessary performance and design for your visualization project.

But why should you opt for a wall mounted touch panel?

„Smart-Devices“, such as smartphones or tablets are an comfortable extension of a building visualization. However, access to important

and relevant building functions must be realized by means of a fail-safe and stable DIVUS touch panel, which has been developed for continuous operation and can not be misplaced, forgotten or lost. Touch panels manage and control the functions of your home, without neglecting any safety-relevant requirements. Protected functions such as turning on/off of the alarm system or the opening of the entrance door must not - especially not exclusively - be handled by mobile devices with the risk of getting into the hands of strangers.

„Wall-mounted touch panels represent SECURITY, RELIABILITY and continuous AVAILABILITY.“

For every application

For private or professional use

In our product portfolio, you will find the right solution for your home or working area. From touch panels for building automation, door intercom systems and the complete system KNX CONTROL you will find the right solution for your needs and requirements.

DIVUS stands for Aesthetics & Design, Control, Security and Simplicity!

A DIVUS wall-mounted touch panel expresses your personal style. Whether it is an elegant, restrained or stylishly eye-catching decorative frame, you'll be sure to find a solution that suits your tastes. It is not only the way touch panels look that is so impressive, but also their performance and functionality. Regardless of whether your DIVUS touch panel is designed for use in an apartment, single-family/multi-family

dwelling, townhouse or villa, you can count on finding a model that delivers optimal performance.

The other major use to which DIVUS building panels can be put is in the commercial domain, i.e. hotels, offices, medical practices, stores, spas, health clubs, bars/restaurants, warehouses, factories, reception areas, and cruise ships (cabins and public areas).

Efficient, small operating units can also control complex office building. In such settings, our touch panels can also be used, apart from the building automation control, to display product presentations and/or surveillance camera images (e.g. in high-end stores), and as guidance system.

DIVUS VIDEOPHONE

DIVUS OPTIMA

DIVUS TOUCHZONE 7

New quality of life

Feel at home

A smart home means sustainable system security, innovation and future-proof investment. These are the best prerequisites for increasing quality of life, flexibility and safety. Therefore, intelligent building technology should now be an integral part of every electrical installation.

A smart electrical installation makes the life easier and saves time for important things. With a simple fingertip, you can close all windows, close the shutters, turn off all the lights and turn on the alarm system

within a few seconds. This is just one of many scenarios that can be programmed. The building is adapted to the individual needs of the residents and turns into a place of well-being for the whole family.

DIVUS DIVUS offers you the right technology for your needs. DIVUS KNX CONTROL is a system for building visualization, which enhances the comfort and value of your property. It can be operated by anyone, whether young or old, everyone can handle it.

Security & Future

Always a good feeling

Times are changing. And security, control and monitoring of the home is getting more and more important in order to sleep peacefully and enjoy holidays far away from home. Since prevention is the best protection for the whole family and the house, DIVUS offers the integration of alarm systems, fire alarm systems and video systems.

When you grow older and slow down a bit, an intelligent building makes your life easier.

A smart home supports the people in all aspects of life and makes

everyday life easier. Our credo is: „Technology should serve a person, not vice versa!“

A simple and intuitive operation, understandable control functions and variable-sized input objects support the needs of each generation. In order to be able to remain independent even in old age, the intelligent home serves not only as a helper, but also as a watchdog in an emergency. In unusual situations, warnings and alarms can be automatically sent to defined organizations or family members to detect and avert dangerous or unwanted conditions at an early stage.

DIVUS CIRCLE

Energy efficiency

Saving energy made easy

DIVUS TOUCHZONE 15

Saving resources is a good thing not only for the environment, but also for your pocketbook. Carbon emissions can be reduced by up to 20 percent through the use of intelligent building technologies, which operate in intelligent homes without sacrificing comfort or making energy saving a nagging concern.

DIVUS provides an energy management system, which independently controls the intelligent home through a variety of sensors. The energy consumption of heating, cooling, shading, lighting, ventilation and power supplies is optimized by logical operations, therefore the energy costs can be dramatically reduced. The indoor climate

constantly adapts to the needs of the residents while reducing the energy consumption and increasing the well-being considerably. Increasing numbers of functions are bundled and components are subject to overarching control systems in that window contacts are integrated in the heating control system. The nominal temperature is reduced at night or when the building is unoccupied, thus saving energy. Room lighting and temperature are automatically adjusted as weather conditions change. This means that not only is light intensity adjusted, but also color harmony is varied according to the time of day and personal perceptions, thus providing particularly comfortable living room lighting.

Entertainment

Exactly as you like it ...

Start well informed in a successful day. With a DIVUS touch panel, you are always up-to-date with RSS feeds, exchange rates, sports results, the latest weather reports and many other relevant information.

For a perfect entertainment you can integrate a multiroom audio

system into your building automation system. With a DIVUS touch panel, you have access to your music library all over the house. Play different music in different rooms at the same time, or the same music in all rooms. Wake up with your favourite song in the bedroom, drink a coffee listening to the radio news in the kitchen and take a bath listening to your „chill-out“ play list.

Welcome

Smart Intercom

DIVUS presents the new network-based digital door phone solution CIRCLE. Not only his appearance is groundbreaking, but also his inner values.

DIVUS CIRCLE is a full-duplex video door station with 17.8 cm / 7" dual-touch display and capacitive touch sensor. The display in combination with the proximity sensors interacts with the visitor, who is accompanied by the DIVUS CIRCLE proximity and ringing process.

In stand-by mode, the door intercom appears to be just a round disk on the wall. But thanks to the integrated radar or proximity sensors, the LED ring and the display are activated at a distance of 8 m when the visitor approaches. The visitor is greeted by the display, with a septic look and a decided rejection.

How the visitor should be welcomed, the host can set by means of simple configuration itself.

The day and night vision camera (resolution 1920 * 1080; 1-25 (30) ftp/sec) allows the homeowner to receive crisp video images from his door station at any time of the day, allowing him to know at any time what's going on at his front door.

Speaker and microphone can score with acoustic echo cancellation and full duplex. This guarantees noise-free and problem-free communication even with loud street noise.

The RGB LED ring behind the glass is a full-fledged wall

lamp and makes an extra superfluous. The entrance area will be dipped in the color of your choice.

Optionally, DIVUS CIRCLE can also be used as RFID reader and open the door via badge.

Thanks to VoIP support, DIVUS TOUCHZONE or another DIVUS touch panel with DIVUS VIDEOPHONE can be used as an indoor station. It is an elegant solution for family homes, apartment complexes as well as for office tower.

Benefits at a glance:

- Simple planning, installation and initial startup
- 100% digital and therefore future-proof
- Available with the internal unit DIVUS TOUCHZONE
- Ideal for small and large systems
- Customizable
- Security

DIVUS CIRCLE

A vision becomes reality

DESIGN PLUS powered by light+building

Display 17,8 cm (7") – Diameter 24 cm

DIVUS had a vision.

With an irrefutable belief in itself and its ability, DIVUS pursued this vision on the long path to perfection and expressed it in DIVUS CIRCLE.

The result far exceeded our expectations. The combination of the timelessly reduced design and the innovative features form a smart device of the highest sophistication and exclusivity. DIVUS CIRCLE is the ideal fusion of form and function – it has become visible perfection.

DIVUS CIRCLE has become visible perfection.

DIVUS chose the circle in its formal language, as this phenomenon differs significantly from the competition and sets new standards. The circle is a form that distances itself from all strictly shielded approaches and adapts perfectly to different structural conditions.

In stand-by mode, when the touch screen is not visible, the floating surface optimally integrates into your surroundings thanks to its slightly reflective surface and has a positive effect on passers-by thanks to its soft, rounded shape.

DIVUS CIRCLE

Multiple award-winning design

The juries were of the same opinion: form and function unite in a unique way to DIVUS CIRCLE.

It is door station, wall lamp and digital bodyguard all-in-one – the optimal product at your front door.

DIVUS CIRCLE has won several prestigious awards.

Not only the exceptional shape, an appearance clearly different from the competition and setting new standards, but also the smart, innovative features, the easy and intuitive operation and the high quality of the product are honored.

„Our design process began with the search for the extraordinary, an appearance that leaves the mass of ever-similar products behind while meeting the taste of the crowd.

A form that welcomes the user directly at the front door, at the gate, or at the internal reception and communicates through its changeability on different levels.

The answer was the CIRCLE.

Almost magical, like an aura, the backlight shines at dusk. The soft lighting brightens the entrance area and provides an unobtrusive additional security and serves as a guide.

Circle automates everyday functions in an individual way and provides security and transparency in an ever-changing environment.“

Christian Zanzotti, Designer

THE CIRCLE IS ICONIC, TIMELESS AND REDUCED

DESIGN PLUS
powered by light+building

The product innovation for the entrance:
intelligent, intuitive and versatile

Innovative features

The classic features of the doorbell are being upgraded, ushering in a new era of door intercom systems. This video intercom system convinces with his innovative aesthetics and the modern technology. A smart building can now be recognized right at the front door.

The high-resolution 17.8 cm (7") display can also display personal messages or specific information of the highest quality. The clear and intuitive user interface guides both safely and easily through the settings: the homeowner in the configuration, as well as the guest of the bell. In addition, the user interface is designed so that, for example, the color scheme and display screen can be configured by the homeowner according to their personal taste.

DIVUS CIRCLE is equipped with a camera with day and night vision, as well as a fisheye lens. Speaker and microphone with echo cancelling guarantee perfect call quality even with street noise.

DIVUS CIRCLE becomes a digital butler that is omnipresent and always available, reliably accepting and passing on messages. At the same time he is your personal butler and guard of your house. Guests are greeted, skeptically observed or decidedly rejected, depending on preset preferences and scenarios the resident has chosen.

More than just a bell

The CIRCLE is to be installed in the wall with his mounting box. Thanks to the 8mm thick wall structure, the mounted CIRCLE seems like a weightless floating object. The glass hides the powerful and energy-saving RGB LED ring. It is designed so that it can function as a full-fledged wall lamp. The color of the LEDs can be set by the homeowner at will and wrap his entrance in a pleasant color. The brightness sensor regulates the strength of the LEDs.

DIVUS CIRCLE is bodyguard, door intercom & wall lamp in one!

Reliable and omnipresent:
Your personal butler & bodyguard

Under observation

Thanks to a proximity sensor, CIRCLE awakes thanks to his proximity sensor. An individual avatar appears, which acts as a digital butler, greeting or „observing“ visitors. The homeowner can make these settings himself in advance through a convenient and intuitive configuration, depending on personal preferences and needs, e.g. day or night time, day of the week, vacation. He chooses between the predefined profiles „Friendly“, „Skeptical“ and „Bodyguard“.

Within these profiles, three avatars can be selected: the watchdog,

the observing eye or the attentive agent. The dog, for example, becomes an inviting lapdog under the „friendly“ attitude, while in the „bodyguard“ profile it becomes a deterrent watchdog.

Coming closer the avatar leaves its place to the selected dashboard. During the day, personal information such as address, family name and family photo can be shown. The homeowner decides for himself how much he wants to display.

DIVUS CIRCLE

Comfortable and versatile

The integrated LCD touch display guarantees optimal usability of the innovative features of DIVUS CIRCLE. The user interface has been designed to be intuitive and easy to use and this for both the homeowner in the configuration, as well as for the visitor in daily use.

The user interface is designed that the color scheme and the

dashboard information can be configured by the homeowner according to their personal taste.

The use of the DIVUS CIRCLE by the visitor is characterized by continuous feedback. The intercom interacts with the guest, making you feel comfortable with every action you are taking.

DIVUS CIRCLE is equally suitable for use in single-family homes, villas, office buildings and complex tower buildings

In large, complex residential buildings and office towers, the touchdisplay enables the placement of all names or residential parties in telephone book look. The necessary data can be displayed and selected with convenient and commonly known swipe gestures.

The SIP-based DIVUS CIRCLE also takes over the function of an answering machine, since voice messages are accepted and can be called

upon by the indoor call station. On request, photos can be taken and saved temporarily of any visitor.

DIVUS CIRCLE is equipped with an optional RFID receptor, which eliminates the need for a key. A temporary access code gives you the possibility to allow certain people exclusive access to the building at predefined times.

Villa

Compound

Tower

All from one hand:
DIVUS CIRCLE bundled with DIVUS TOUCHZONE and DIVUS APPS

A system becomes the solution

DIVUS CIRCLE as the outdoor station in combination with DIVUS TOUCHZONE installed in the house, will get you a bundle that stands for total comfort, increased safety and elegant design.

The DIVUS Apps VIDEOPHONE for door communication and OPTIMA for building control make the bundle a holistic system that sets new

standards. Coordinated with each other, the devices guarantee a perfectly functioning symbiosis, which supports them in everyday living.

The multi-function touchpanel inside the house also gives you the option to control your building, using it as a multi-room controller or IP CAM viewer and much more.

DIVUS CIRCLE small

Little brother with great effect

M 1:1

We like to call the CIRCLE small the little brother of the DIVUS CIRCLE. Despite the smaller external dimensions, it is as „big“ in hardly anything. So he is a fully functional, SIP-based video door intercom station including capacitive bell, camera, proximity sensor and RFID module. CIRCLE S is available with or without display.

It is intended to be used as an indoor unit in residential buildings, at side entrances or backdoors. The rear LED ring shines in a white, pleasant light. It is strong enough to illuminate the entrance area independently. So CIRCLE S also makes a great figure as a full-fledged wall lamp.

DIVUS OPENDOOR

IP Intercom communication

DIVUS OPENDOOR is the network based intercom solution. Outdoor and indoor stations are connected via LAN cable. Incoming door calls show you immediately the visitor. You can communicate with him and open the door if necessary.

The transmission of voice and image via Ethernet makes it easy to put the door station for the smart home into operation. The data is converted to digital signals without further intermediate steps or devices and then transported over the network in a specific protocol.

DIVUS OPENDOOR supports the SIP protocol, which has established itself worldwide as the standard for IP telephony. In all devices SIP is directly implemented with the necessary LAN interface; additional adapters or converters are not necessary.

Especially in companies that already have IT networks and structured cabling, this results in significant advantages. Existing IT resources can be used, eliminating the need for an additional line network.

Thanks to VoIP support, DIVUS TOUCHZONE or another DIVUS touch panel with DIVUS VIDEOPHONE can be used as an indoor station.

DIVUS OPENDOOR stands for freedom of choice. You can assemble your door intercom according to your needs. The various functional elements, e.g. Camera, audio and bell modules can be installed flush with letterboxes or in stand-alone columns and with design frames in different colors and shapes.

DIVUS VIDEOPHONE

Innovative Intercom-solution

VIDEOPHONE, the solution, to control your video intercom system comfortably from your Building touch panel.

DIVUS VIDEOPHONE offers the following advantages:

- Compatibility with all common intercoms supporting a/b signals, like e.g. Jung, TCS, GIRA, Siedle, Elcom and many more, by connecting them via DIVUS VIDEOPHONE BOX
- Interphone function for communication between the individual panels
- Extended intercom functions such as Answer / Decline, video on / off, volume control including mute function, speed dial, keypad,

modifier keys, ...

- Automatic popup of the graphical user interface during calls
- Intelligent volume management: The software learns about the behavior of the user when the volume should be adjusted
- Dynamic speed-dial buttons: Speed-dial buttons can be activated directly from the phonebook
- Picture archive: With every door call, a picture is saved by the visitor if necessary
- Remote mode for mobile devices
- Installed and licensed for free on DIVUS touch panels
- Customizable user interface and ringtones
- Instant snapshot

DIVUS APPS

With DIVUS OPTIMA, you connect the mobile world with your home. You can easily control and manage your smart home with a tablet or smartphone. The app works as a client software,

which connects your DIVUS KNX CONTROL device and gives access to your KNX system.

With DIVUS VIDEOPHONE you can bring your building's intercom on your smartphone/ tablet. Receive door calls on the go and conveniently on

your smartdevice. See who is standing in front of your door, talk to your guest and press the door opener, everything comfortable and mobile.

With DIVUS WORLD you can bring the DIVUS catalogs to life! Start the app and scan the catalog pages marked with the „DIVUS WORLD“ icon. And

you will discover the world of DIVUS with exciting videos and tutorials. Enjoy it on- and offline!

DIVUS APPS

Apps for DIVUS TOUCHZONE

EXKLUSIV

All apps on this page are specially designed for DIVUS TOUCHZONE. They make everyday life in Smarthome easier and more comfortable.

The DIVUS LAUNCHER app is the main app of DIVUS TOUCHZONE and can be understood as start screen / main graphical interface of the product. The DIVUS

LAUNCHER app shows a simple grid of 6 fields that permit a quick access to the most important functions / apps.

DIVUS KIBRO is the perfect application for everyone that wants to visualize web contents in full screen mode. Actually it is a small kiosk browser app, which provides a set of options for configuration.

Special about DIVUS KIBRO is the integrated cache management.

Mit dem DIVUS MÜLLPLANER vergessen Sie nie wieder den Müll rechtzeitig vor Ihr Haus zu stellen. Die App gibt Ihnen die Möglichkeit einfach und intuitiv den

Überblick über die wichtigsten Termine zu behalten. Dank der Erinnerungsfunktion entgeht Ihnen in Zukunft kein Termin mehr.

With the DIVUS IP CAM VIEWER you always know what is happening in and outside your building. The app allows easy access to your installed IP cameras.

Additionally, screenshots can be made and saved in a simple way.

The app DIVUS SCREENCLEANER disables the touch function of the display for 30 seconds. At the same time a small „animation“ and a countdown

is displayed, during which time the glass front of the touch panel can be cleaned without risk of unintentional operation.
